

PERSONAL
INFORMATION

CERTIFICATIONS

CCNA (Cisco Certified Network Associate)
June 2026

eJPT v2 (Junior Penetration tester)
Nov 2024

AZ - 900 (Microsoft Azure Fundamentals)
May 2022

SKILLS

Networking, Routing and Switching, IPv4 / IPv6, DHCP, DNS, TCP/IP, Troubleshooting

Python, JS

OS: GNU/Linux, Windows

Cybersecurity: Pentesting

Warehouse Management Systems (WMS)

EDUCATION

Bachelor of Law
Universidad abierta interamericana
2006 - 2013

Name

PROFILE

Highly motivated IT professional with a solid foundation in networking (CCNA certified, June 2026), cloud architecture (AZ-900), and practical cybersecurity (eJPT v2). Proven ability to combine advanced technical troubleshooting (Python, Linux, and network diagnostics) with an understanding of warehouse operations and logistics workflows. Experienced as an elected Union Representative in Denmark, demonstrating mature communication, conflict resolution, and the ability to act as a reliable bridge between technical teams and business operations.

WORK EXPERIENCE

Warehouse operator2025 - Present
Netto • Full time

- **Elected Union Representative (Tillidsrepræsentant):** Selected by peers to serve as the trusted voice for the workforce, mediating complex workplace situations and collaborating closely with corporate management to align with the Danish labor model.
- **Warehouse Operations & WMS:** Manage daily logistical operations, ensuring accuracy in picking, dispatch, inventory auditing, and executing real-time data updates within the Warehouse Management System (WMS).

Volunteer security researcher2024 - 2024
Start up • Part time

- **Vulnerability Research & PoC:** Collaborated with executive leadership to design and implement security Proofs of Concept, identifying critical web application attack vectors.
- **Critical Risk Mitigation:** Discovered and documented high-impact vulnerability—including an IDOR capable of full account takeover—demonstrating deep analytical and documentation skills.
- **API Security & Hardening:** Identified a critical API vulnerability that exposed database schemas, delivering precise remediation recommendations for endpoint hardening.

Volunteer security researcher2024 - 2024
UNL • Part time

Multimedia and web design

Universidad del litoral

2023 - paused

LANGUAGE

English - Fluent

Spanish - Native

Chinese - Experienced

Danish - Beginner

LINKEDIN

GITHUB

- **Critical Vulnerability Research:** Identified and reported a critical horizontal IDOR vulnerability within a core institutional web architecture.
- **Access Control Bypass:** Demonstrated the ability to bypass authorization filters to gain unauthorized access to virtual campus environments.
- **Data Protection & Compliance:** Prevented the potential exposure of PII (National IDs and personal data) for the entire university population through precise technical reporting.

PERSONAL PROJECTS

News To Telegram Bot (Python & Automation) • Ready

- Developed an automated data-scraping tool using Python, Selenium, and Requests to parse updates from security intelligence platforms.
- Integrated local LLM deployment (DeepSeek via Ollama) to process multi-source technical reports into automated concise summaries delivered via Telegram API.

CCNA Labs

- Designed and debugged complex routing, switching, and security topologies using Cisco Packet Tracer and Boson simulation environments.
- Repository: github.com/guanapi/Packet-Tracer-Labs

PDFScrapper Desktop Application (Python & UI) • Ready

- Built a desktop automation utility with a graphical user interface (Tkinter) designed to assist research workflows.
- Programmed custom logic to scan directories, extract context surrounding targeted keywords, and dynamically generate formatted Word document indexes.

Linux Core Utilities Replication

Tech Stack: Python (Standard Library), Linux, Networking, Git.

Engineered custom implementations of core Linux utilities in pure Python to deepen hands-on knowledge of system operations and networking fundamentals.

- Replicated standard CLI commands and behavior using Python's standard library, handling system streams and file operations without external dependencies.
- Applied software development best practices and Git version control to build a clean, modular, and extensible codebase.
